Digital Literacy

Project

Name: *Akshaj Chaudhary*

Registration Number: *25BAS10100*

Branch: *Aerospace*

Introduction

This project was completed as part of the Digital Literacy course. The aim was to develop essential digital skills required for students in today's world. As a Digital Ambassador, I explored various tools and platforms that help in building a professional presence, communicating effectively, and staying safe online. The project consists of five tasks including infographic creation, portfolio building, platform exploration, email etiquette, and cybercrime awareness. Each task helped me gain practical knowledge and understand the importance of responsible digital behavior.

Task 1

This project was completed as part of the Digital Literacy course. The aim was to develop essential digital skills required for students in today's world. As a Digital Ambassador, I explored various tools and platforms that help in building a professional presence, communicating effectively, and staying safe online. The project consists of five tasks including infographic creation, portfolio building, platform exploration, email etiquette, and cybercrime awareness. Each task helped me gain practical knowledge and understand the importance of responsible digital behavior.

Task 2

In this task, I created profiles on GitHub, LinkedIn, and HackerRank. GitHub is used for storing and sharing projects, LinkedIn is a professional networking platform, and HackerRank is used for improving coding skills. I updated my GitHub profile with basic information and created a README file. On LinkedIn, I added my education details. These platforms are very useful for students as they help in building a strong online presence. Over the next four years, I plan to regularly update my profiles with projects, certifications, and achievements. This will help me in getting internships and job opportunities in the future.

Task 3

I explored coding and collaboration platforms in this task. I used HackerRank and completed a beginner-level problem called "Solve Me First." This helped me understand the basics of coding practice platforms. I also created a Google Form quiz on digital literacy awareness. The form included multiple-choice and short-answer questions. This activity helped me learn how to collect and analyze responses using Google Forms. These tools are very useful for academic purposes, such as assignments, quizzes, and teamwork. Overall, this task improved my technical and collaboration skills.

Task 4

Digital communication plays an important role in professional life. Poor communication can lead to misunderstandings and create a negative impression. For example, sending an informal or unclear email to a professor may result in confusion or rejection. In this task, I learned how to write professional emails with proper structure, tone, and format. I also created a checklist for responsible social media usage. This task helped me understand the importance of clear and respectful communication in the digital world.

Task 5

While researching cybercrime, I was surprised to learn how common online frauds have become, especially UPI scams. Many people fall victim due to lack of awareness. This task helped me understand how these scams work and how they can be prevented. I learned the importance of not sharing OTPs and verifying payment requests. As a result, I will be more cautious while using online payment systems and will follow safe digital practices in my daily life.

Conclusion

This project helped me gain a better understanding of digital literacy and its importance in modern life. I learned about online safety, professional communication, and useful digital platforms. These skills will help me in my academic journey and future career. Overall, this project was a valuable learning experience.
